

We are hiring!

Position available: Postdoctoral Research Associate

Location: Seattle, WA

Overview: The Harrison Lab at the Benaroya Research Institute (BRI) in Seattle, WA is seeking postdoctoral candidates in the area of mucosal immunology, specifically T and B cell responses to commensal microbes.

Benaroya Research Institute is an internationally recognized medical research institute focused on finding cures for autoimmune and immune-mediated diseases. We stress excellence in advanced laboratory experimentation and carefully designed translational research programs. This offers our scientists the opportunity to directly impact the lives of people suffering from diseases including type 1 diabetes, rheumatoid arthritis, multiple sclerosis, allergies and asthma.

The Harrison Lab (www.harrison-lab.org) works to understand the mechanisms controlling host-microbe interactions within the gastrointestinal tract. We study how commensal microbes influence the development, education and function of our immune system. We utilize a multi-disciplinary approach combining development and implementation of tools to track commensal-specific T and B cells in healthy and inflamed tissues, with single-cell and population level transcriptomics and epigenetic analyses of T and B cell differentiation to investigate how the host mounts and regulates immunity to the microbiome.

Potential projects in the Harrison Lab will build on exciting recent findings including:

- The transcriptional and epigenetic basis of commensal-specific T cell differentiation during healthy immune responses and immune-mediated diseases.
- Induction and regulation of commensal-specific B cells in the gastrointestinal tract.
- Investigation of cross-reactivity between commensal microbes and auto-antigens.

Qualifications: A recent, or anticipated, PhD, or MD/PhD in Immunology or related field is required. Experience in immunology, molecular biology and/or bioinformatics-based analysis of epigenetic/transcriptomic datasets are strongly preferred. Experience of animal models of inflammation or infection is preferable but not essential.

Compensation & Benefits: \$65,479 – \$68,490. Please click [here](#) for benefit summary.
